

Introduction of K-Map (Karnaugh Map)

[Read](#)

[Discuss](#)

In many digital circuits and practical problems we need to find expression with minimum variables. We can minimize Boolean expressions of 3, 4 variables very easily using K-map without using any Boolean algebra theorems. K-map can take two forms Sum of Product (SOP) and Product of Sum (POS) according to the need of problem. K-map is table like representation but it gives more information than TRUTH TABLE. We fill grid of K-map with 0's and 1's then solve it by making groups.

Steps to solve expression using K-map-

1. Select K-map according to the number of variables.
2. Identify minterms or maxterms as given in problem.
3. For SOP put 1's in blocks of K-map respective to the minterms (0's elsewhere).
4. For POS put 0's in blocks of K-map respective to the maxterms (1's elsewhere).
5. Make rectangular groups containing total terms in power of two like 2,4,8 ..(except 1) and try to cover as many elements as you can in one group.
6. From the groups made in step 5 find the product terms and sum them up for SOP form.

SOP FORM :

1. K-map of 3 variables –

		BC			
		B'C'	B'C	BC	BC'
A	0	A'B'C'	A'B'C	A'BC	A'BC'
	1	AB'C'	AB'C	ABC	ABC'
		0	1	3	2
		4	5	7	6

SOP(MINTERMS)

8 Blocks = 1
 4 Blocks = 1 variable term
 2 Blocks = 2 variable term
 1 Block = 3 variable term

K-map SOP form for 3 variables

$$Z = \sum A, B, C(1, 3, 6, 7)$$

		BC			
		00	01	11	10
A	0	0	1	1	0
	1	0	0	1	1
		0	1	3	2
		4	5	7	6

no need of this group as we've already covered those 1's

Groups of two elements in one group

From **red** group we get product term—

$$A'C$$

From **green** group we get product term—

$$AB$$

Summing these product terms we get- **Final expression (A'C+AB)**

2. K-map for 4 variables –

		CD	C'D'	C'D	CD	CD'
		00	01	11	10	
AB						
A'B' 00		A'B'C'D'	A'B'C'D	A'B'CD	A'B'CD'	
A'B 01		A'BC'D'	A'BC'D	A'BCD	A'BCD'	
AB 11		ABC'D'	ABC'D	ABCD	ABCD'	
AB' 10		AB'C'D'	AB'C'D	AB'CD	AB'CD'	

SOP(MINTERMS)

16 Blocks = 1
 8 Blocks = 1 variable term
 4 Blocks = 2 variable term
 2 Blocks = 3 variable term
 1 Block = 4 variable term

K-map 4 variable SOP form

$$F(P, Q, R, S) = \sum(0, 2, 5, 7, 8, 10, 13, 15)$$

as k-map is assumed to be connected so we can make group this way

		RS	00	01	11	10
PQ						
00		1	0	0	1	
01		0	1	1	0	
11		0	1	1	0	
10		1	0	0	1	

as we have to take maxm. elements in a group so we've made 1 group of 4 1's not 2 groups of 2 1's

From **red** group we get product term—

QS

From **green** group we get product term—

Q'S'

Summing these product terms we get- **Final expression (QS+Q'S')**

1. K-map of 3 variables –

		BC			
		B+C 00	B+C' 01	B'+C' 11	B'+C 10
A	0	A+B+C 0	A+B+C' 1	A+B'+C' 3	A+B'+C 2
	1	A'+B+C 4	A'+B+C' 5	A'+B'+C' 7	A'+B'+C 6

POS (MAXTERMS)

8 Blocks = 0
 4 Blocks = 1 variable term
 2 Blocks = 2 variable term
 1 Block = 3 variable term

K-map 3 variable POS form

$$F(A, B, C) = \pi(0, 3, 6, 7)$$

		BC			
		00	01	11	10
A	0	0	1	0	1
	1	1	1	0	0

From **red** group we find terms

A B

Taking complement of these two

A' B'

Now **sum** up them

From **brown** group we find terms

$$B \quad C$$

Taking complement of these two terms

$$B' \quad C'$$

Now sum up them

$$(B' + C')$$

From **yellow** group we find terms

$$A' \quad B' \quad C'$$

Taking complement of these two

$$A \quad B \quad C$$

Now **sum** up them

$$(A + B + C)$$

We will take product of these three terms : **Final expression –**

$$(A' + B') (B' + C') (A + B + C)$$

2. K-map of 4 variables –

		CD			
		C+D	C+D'	C'+D'	C'+D
AB	00	00	01	11	10
	A + B	00	01	11	10
A + B'	01	01	00	10	11
	A + B'	01	00	10	11
A'+B'	11	10	11	00	01
	A'+B'	10	11	00	01
A'+B	10	11	10	01	00
	A'+B	11	10	01	00

POS(MAXTERMS)

- 16 Blocks = 0
- 8 Blocks = 1 variable term
- 4 Blocks = 2 variable term
- 2 Blocks = 3 variable term
- 1 Block = 4 variable term

$$F(A,B,C,D)=\pi(3,5,7,8,10,11,12,13)$$

CD \ AB	00	01	11	10
00	1 0	1 1	0 3	1 2
01	1 4	0 5	0 7	1 6
11	0 12	0 13	1 15	1 14
10	0 8	1 9	0 11	0 10

From **green** group we find terms

$$C' \quad D \quad B$$

Taking their complement and summing them

$$(C+D'+B')$$

From **red** group we find terms

$$C \quad D \quad A'$$

Taking their complement and summing them

$$(C'+D'+A)$$

From **blue** group we find terms

$$A \quad C' \quad D'$$

Taking their complement and summing them

$$(A'+C+D)$$

From **brown** group we find terms

A B' C

Taking their complement and summing them

$$(A' + B + C')$$

Finally we express these as product –

$$(C + D' + B') \cdot (C' + D' + A) \cdot (A' + C + D) \cdot (A' + B + C')$$

PITFALL– *Always remember *POS* ≠ (*SOP*)'

*The correct form is (POS of F)=(SOP of F)'
